PROFILE

Hi, I am Vishal Gangwar. I am a beginner Android App Developer and I use Java for making modern, fluent, optimized and polished mobile experiences for end users.

PROJECTS

Task Mate App(Full Stack Android Application)

Task Mate App

- Developed a full stack Android application using Java
- Backend developed using Firebase Authentication and Cloud Firestore
- Implemented Login and Registration system
- Enabled users to Add, Edit and Delete task (CRUD Operation)
- Displayed task list using RecyclerView
- Implemented Task Priority and task status management
- Used Firestore Snapshot Listener for real-time data updates
- Structured user-wise data storage (users/{uid}/tasks)

Student Connect App (Full Stack Android Application)

Student Connect App

- Developed a full stack Android application using Java
- Backend developed using PHP and MySQL
- Implemented Login & Registration system
- Displayed job listings using RecyclerView
- Created Job Detail screen with Apply Job feature
- Implemented Applied Jobs module
- Used Retrofit for REST API communication
- Used JSON for data exchange between app and server

Notes App

Simple Notes App

A simple notes app where you create notes and heading to keep track of important information

Todo App

Simple Todo App

A simple todo app where you can track your daily tasks easily made in Java.
